

Simple Network Consulting

WHAT WE DO

Server Maintenance:

Your servers are the heartbeat of your network. Our server maintenance plans are designed to keep your server(s) updated and always working to produce the expected performance for your network users. Our server maintenance plans are used to monitor and verify the following:

- ✦ Check the following: server log files, hard disk space, core file and folder permission, complete security, application functionality, redundancy, backups and more....
- ✦ Applying necessary service packs and updates
- ✦ Recommending necessary software and hardware upgrades

Network Maintenance:

Keep your network operating smoothly and trouble free by having a network maintenance plan carried out by an experienced engineer. Our network maintenance plans are intended to eliminate issues which in the long run cost your business money due to poor performance or breaking down at critical times. Do not wait until your network breaks down to get an expert's help. Our network maintenance plans comprise of:

- ✦ Check the following: network stability, switches & routers, print servers & printers, firewall rules, firewall logs, UPS's and more....
- ✦ Updating firewall and/or switch operating system/ firmware

Desktop Maintenance:

Keep your computer desktops operating at their peak performance and you benefit by greater employee efficiency with reliable computers. Our computer maintenance plans will give your business peace of mind knowing that it will not break down suddenly as an experienced engineer has checked it and applied any necessary patches. Our computer maintenance plans comprise of:

- ✦ Anti-virus software checkups
- ✦ Disk space utilization
- ✦ Defragmentation of hard drives
- ✦ Troubleshoot hardware and software issues
- ✦ Temporary internet files purging
- ✦ Installed software checkups
- ✦ Check log files
- ✦ Install necessary updates and service packs and more....
